

Climate Change Leadership Award (*sponsored by the Department of Environment, Land, Water and Planning*)

WINNER

The Alternative Technology Association

The Alternative Technology Association comprises a motivated group of clean technology enthusiasts who've built a national network to accelerate clean technology adoption. The ATA work through a wide range of channels and activities (from magazines to advisory services and public events), delivering tangible support and value to households, communities and businesses. They are increasingly active in disadvantaged communities and developing countries. ATA members use their individual technical expertise and experience to support system change.

The ATA began in 1980 as a forum for those concerned about the use of fossil fuels and pollution. The interests of the founding members varied but the main aim was to lessen the impact on our planet by action not just talk. Today, the ATA engages with well over 250,000 people each year all around Australia – and beyond.
